

ETM/HA Filters

PTFE Membrane

ETM/HA cartridge and capsule filters consist of a single layer Polytetrafluoroethylene (PTFE) membrane and deliver a higher filtration area and higher flow rate than our standard ETM filter. Designed to meet the needs of the electronics and high-purity chemical industries, ETM/HA products are resistant to virtually all chemicals making them very effective in removing particles in gas and non-aqueous liquid filtration. They are most often used as final filters at the point-of-use, such as at tools. The ETM/HA can also be ordered pre-wetted with water for use in aqueous solutions. Pore sizes range from 0.05 to 5.0 μm and each filter is individually tested to ensure integrity.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company's solution right the first time.

ETM/HA filters are recommended for:

- Compressed Air
- Pressurized Gases
- Non-Aqueous Chemicals
- Solvents
- Tank Ventilation

CARTRIDGES – Nominal Dimensions
Length: 5 to 40 in. (12.7 to 101.6 cm)
Outside Diameter: 2.75 in. (7.0 cm)

CAPSULES – Nominal Dimensions
Length: 2 to 30 in. (5.1 to 76.2 cm)
Outside Diameter: 3.50 in. (8.9 cm)

Maximum Operating Parameters

Extractables

ETM/HA filters typically exhibit low levels of non-volatile residues.

TOC and Conductivity

ETM/HA filter water effluent conforms with the TOC and water conductivity standards of SEMI Standard F63 after an appropriate flush with ultrapure water.

Non-Fiber Releasing

ETM/HA filters comply with Title 21 CFR sections 210.3 (b)(6) and 211.72, for non-fiber releasing filters.

Flow Rates for ETM/HA Cartridges by Pore Size

Water

Flow rates for Cartridge filters are per 10-inch length. The test fluid is water or compressed air at ambient temperature.

Air

Flow rates for Cartridge filters are per 10-inch length. The test fluid is water or compressed air at ambient temperature.

Flow Rates for ETM/HA Capsules by Pore Size

Water

Flow rates for Capsule filters are tested using a 2" capsule filter with 1" sanitary inlet and outlet ports. The test fluid is water or compressed air at ambient temperature. Flow rates for larger capsules will scale with filtration area. Rates will vary based on end configuration of the capsule.
